

Hat Mockups & Client Proofs — show it on a real hat, get it approved

Before anyone cuts material, show the customer exactly what they're getting. The Hat Builder mocks your patch onto real hats; proofs get you a yes in writing.

patchforge.makerfoundryco.com · a Maker Foundry tool

1 Open the Hat Builder

Click **Hat Mockup** in the top nav, or hit **Preview on hat** from the Patch Builder toolbar (that saves your design and carries it straight over). You can also pick any saved design or upload a patch image.

2 Place the patch

Choose a **hat**, its **color/variant**, and the **view**, then position and size your patch on it. Switch colors and views to see the design across the whole product line.

3 Send a proof

Click **Share / Send to Client** to mint a unique proof link (like `/p/ab12cd`). Your customer opens it in any browser — no login — and clicks **Approve** or **Request Changes**, with a comment box for notes.

Want to show several colorways at once? Add each mockup to the **proof bundle** tray and send them all under one link.

Approvals and change requests show up on your Proofs page, so you always have a paper trail before production.

4

Track & revise proofs

Open **Proofs** from the account menu to see every proof with its status — *pending*, *approved*, or *changes requested* — the customer's comment, and a **Copy link** button.

Need to update one? **Send revision** pushes a new version to the same link, and **Revise bundle** loads the whole set back into the Hat Builder so you can rework it.

Approved before you cut — every time.
